Tailor-made Concepts

Your success is our claim

SERVICE CONCEPTS

CLEANING CONCEPTS

MARKETING CONCEPTS

WAREHOUSE LOGISTICS CONCEPTS

Where tradition meets innovation, we rediscover service – personalised, practical and professional. Inspired by Giovanni L.'s long-standing mentality as a host, you are at the centre of our attention. We provide you with customised concepts for service, cleaning and industrial sites.

SERVICE RE- DISCOVERED

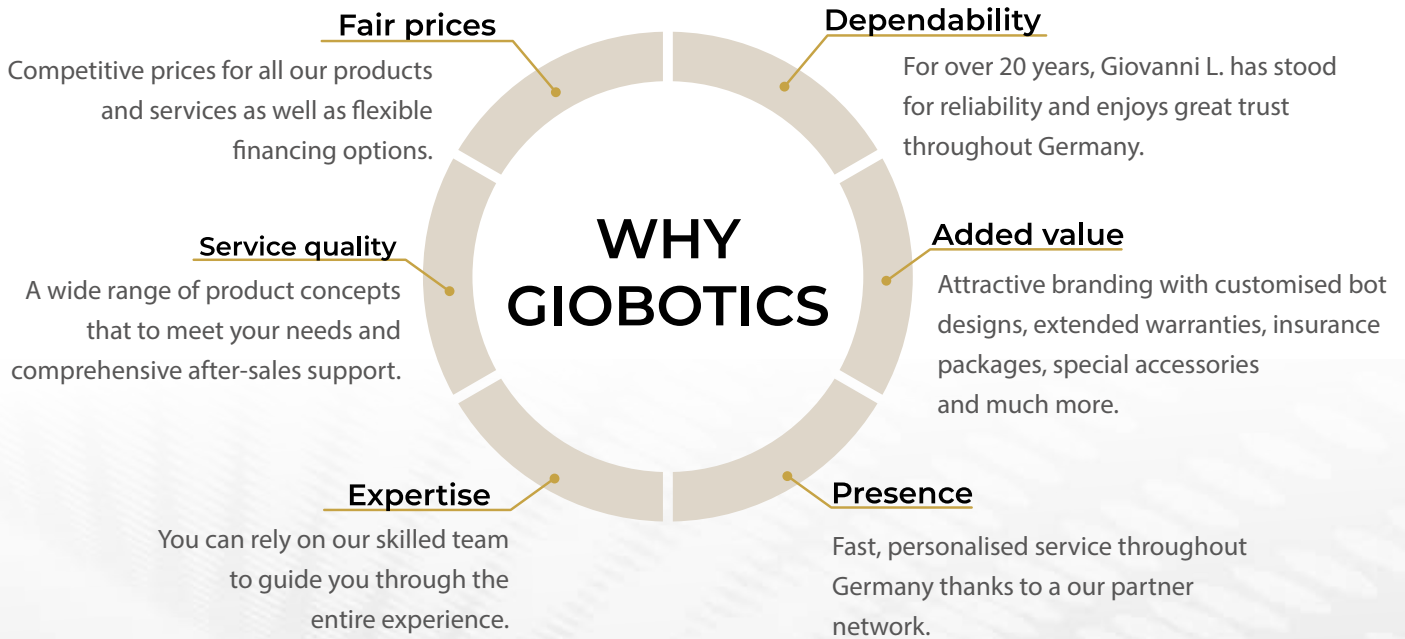

Your success is our claim

We offer customised solutions and comprehensive concept ideas, tailored to the specific requirements of your company. This includes the implementation of our service or cleaning robots, the provision of the necessary accessories and the integration of all required functions.

If a leasing model or an extended service guarantee is of benefit to you, we are always at hand to advise you. Our concepts cover all these aspects.

Why Giobotics

More than just a robot installation

We see ourselves as your partner and measure our success by how well you progress with our solutions progress with our solutions.

*Exactly the
support, I need...*

Service Concepts

Reduce walking distances and minimise loads

Depending on the size of a café or restaurant, service staff walk up to 18,000 steps a day and carry many kilos of heavy crockery. Our service robots can take over these tasks, freeing up staff to concentrate on more important tasks. With our bot your service staff can be hosts once more and create not only a special experience for your guests, but also feel measurable relief!

SERVICE CONCEPTS

PUDU

BellaBot

#thewaiter

SERVICE ROBOTS FOR
THE GASTRONOMY

BellaBot
from €270,00* /pcs.
per month

Our tip

BellaBot & HolaBot together form an
invincible team!

BellaBot – the service professional

The perfect support for your service team, because the BellaBot brings the food and drinks from the pass directly to the customer's table. Different service concepts enable both the restaurant with service staff at the customer's table and self-service restaurants with orders at the counter, terminal or via order app to be reliably supplied by the BellaBot. An illuminated marker on the tray indicates the correct tray to the customer when the order is being delivered. However, if a product is accidentally taken from the wrong tray, the bot registers this immediately and informs the customer in a friendly manner.

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

As well as reducing walking distances for your service team, which also has more time for your guests and more product sales, the BellaBot is a real customer magnet. With its friendly cat face and the pleasant way it communicates with customers and guests – makes young and old generations fall in love with Bella straight away.

The labelling of your BellaBots with an individual design is included.

Possible applications:

- Restaurants with table service
- Self-service restaurants
- Bakery-cafés
- Banquets & events

FOODCOURT

HOSPITALITY

DIGITAL ORDERING SYSTEM

Three service concepts for BellaBot

The Giobotics FoodCourt concept can also be combined with your digital ordering system. This allows your customers to decide for themselves whether to order at the counter/terminal or via QR code at the table. Thanks to our exclusive programming service, it is possible to have the BellaBot process both, receipt numbers and table numbers in parallel. We would be happy to advise you and find the perfect solution for you.

PUDU selling price BellaBot	base price / piece	48 months	60 months	48 months	60 months
				incl. 2.000,- down payment

PUDU

PUDUBot2-S

#Service

SERVICE ROBOT FOR
INDOOR & OUTDOOR AREAS

PUDUBot2-S
from **€153,30** / pcs.*
per month

PuduBot2-S – The all-rounder that can even do the serving outside

Thanks to its special sensor technology, the bot can also be used outdoors, for example on the sun terrace.

PuduBot2-S is very versatile. With its three large tray surfaces, it can process multiple orders at a time. The individual spacing of the shelves can be easily changed or individual shelves can be added or removed. The bot can also do this with a larger object being loaded. For events or banquets, for example, it would be possible to install a box with giveaways, a drink dispenser with a battery or something similar. The bot can carry a total of up to 40 kg.

The PuduBot2-S can be requested to be at any table by using the call function and it can also communicate with the buzzer, thus sending the bot to previously defined destinations is no problem.

Our tip

Thanks to its sensor technology, the PuduBot2 can also be used outdoors.

Possible applications:

- Indoor and outdoor
- cost-effective alternative

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

PUDU

HolaBot

#thecollector

COLLECTING ROBOTS FOR RESTAURANTS AND HOTELS

HolaBot – carries up to 60 kg

Whether equipped with four practical crockery trays or with up to eight levels for loading additional trays - HolaBot is a real winner. The bot can transport up to 60 kg per tour at once and is therefore a powerful support for your team. The bot can be used as a self-propelled crockery trolley. It can either be ordered directly to the table by the service staff using the call function or sent from its fixed position to the scullery at the touch of a buzzer.

The Hola-Service-Station can also be used as an effective stopover. Here, the service staff

clear the table and can optimally pre-sort cutlery, crockery, glasses, bottles, residual waste and leftovers in the dining room. The HolaBot is then called when required and takes everything discreetly and quickly to the scullery.

The labeling of your HolaBot with an individual design is included.

Our tip

HolaBot equipped with 8 dish trays, enables the bot to be emptied quickly in the scullery!

Possible applications:

- Dishwashing robot with call function at the table
- Self-propelled crockery trolley in conference rooms or canteens
- Delivery to the scullery

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

PUDU selling price HolaBot	base price / piece	48 months	60 months	48 months	60 months

Hola-Service-Station

#botaccessories

AS A STAINLESS STEEL VERSION WITH INDIVIDUAL DESIGN OR AS A PIECE OF FURNITURE WITH WOODEN FAIRING AVAILABLE

Hola-Service-Station
(2er / 2x4) from
€2.145 / pcs.
without wheels

Efficient pre-sorting at the Hola-Service-Station

The Hola-Service-Station optimises the process in your establishment. It enables discreet pre-sorting of cutlery, leftover food and waste directly in the guest area. Cutlery and waste are channelled directly into the trays below through integrated holes in the worktop. Additional empty trays are stored in the Hola-Service-Station and awaiting to be used. With a buzzer, a free HolaBot can be called and transport the full tubs to the scullery. This considerably reduces the processing time in the kitchen. The Hola-Service-Station makes it possible to reduce the number of HolaBots required as well as saving labour costs.

The right version for every occasion

The Hola-Service-Station is available in two versions (stainless steel with digital print or wood panelling) and in three different sizes: 2-, 3- and 4-row. For banqueting events and even more flexibility, a version with heavy-duty castors is available. This makes the Hola-Service-Station easy to use in different locations.

Our tip

Have your Hola-Service-Station delivered in a matching design to your bots. This is included in the price!

Possible applications:

- Restaurants with table service
- Guest rooms with long distances to the scullery
- Banquet events & functions

can send the bot to a
predefined spot
or call it.

The prices are net plus VAT and in euros and include a customised design created for you for the front and side panels. A high-performance film, which is additionally protected by a robust surface laminate, is used to apply the stickers.

* Height = top edge of worktop / edge plus +150 mm. The dimensions may vary depending on the panelling of the clearing table (foil / wooden panelling).

** The prices for the wood panelled variants of your choice are calculated on request.

* Height = top edge of work surface / border plus +150 mm. Depending on the cladding of the clearing table (film / wooden cladding), the dimensions may vary.

ELEVATOR compatible**

PUDU

SwiftBot

#theprotector

DELIVERY ROBOTS FOR GASTRONOMY, HOTELS AND CARE FACILITIES

SwiftBot
from **€302,40** /pcs.*
per month

Our tip

SwiftBot can now also communicate with the elevator and use it!

SwiftBot – Closed doors and visual route marking

SwiftBot protects its delivery in a body closed by doors. This keeps food warm and shielded from its surroundings, even over long distances.

The SwiftBot signals its route during the journey by projecting light onto the floor. This allows passers-by to quickly recognize which route the bot is planning. In addition, the bot is equipped with special sensors all around it that enables to recognize people who are in front of, next to and behind it thereby allowing the bot to avoid them or even reverse out of the way. Once at the delivery location, the doors are opened at the click of a button or contactlessly. To do

this, the bot projects a symbol onto the floor and by stepping on the symbol with the foot, the doors of the SwiftBot are opened. Like the HolaBot, the bot can be sent to a predefined destination with a buzzer. It can also be ordered to the table using the app call function.

The latest generation of the SwiftBot is now also able to communicate independently with the elevator. This means that deliveries across floors** are now also possible.

Possible applications:

- Delivery robots for long distances
- Floor delivery e.g. in hotels retirement homes and carecenters

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

PUDU selling price SwiftBot	base price / piece	48 months	60 months	48 months	60 months

PUDU

FlashBot

#theliftlover

ELEVATOR compatible**

ROBOT FOR ROOM SERVICE

FlashBot
from €378,00* / pcs.
per month

FlashBot – discreet delivery by elevator to other floors

FlashBot comes with an automatic elevator function** enabling it to take the elevator without any human intervention. This enables deliveries to be made in hotels or other building complexes, even across different floors. The bot can make up to four deliveries at once per tour, as its body can be divided into four separate compartments. Once the bot has reached its destination, it announces this to the customer via an arrival message on their cell phone or room telephone. The guest or recipient receives a code with which they can then only open the compartment intended for them.

The location of the bot can be tracked in real time via the cloud platform. Other data such as the operating status, data reports and software updates are also managed here.

Our tip

As the recipient receives a code to open the door, confidential content can be delivered.

Possible applications:

- Room service in hotels
- Office and building complexes
- Hospital or nursing home

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

PUDU

PUDU MT1

#garbage_hunter

WITH AI-BASED WASTE DETECTION FUNCTION

PUDU MT1
for €340,26* / pcs.
per month

PUDU MT1 – Recognises the debris and cleans it up!

The PUDU MT1 is your powerful waste chaser with precision – for clean floors in warehouses, logistics centres, DIY stores and industrial production facilities. It has an ultra-wide scanning field of view that effortlessly covers large areas. During routine cleaning rounds, it detects waste and removes it effectively – without your intervention! With the ability to avoid obstacles and people, the PUDU MT1 works safely and accurately in any environment.

Thanks to its robust design, the sweeping robot handles thresholds of up to 20mm and masters grooves up to 35mm with ease. But that’s not all: it communicates with lifts and opens automatic doors and roller shutters independently, making it the ideal cleaning partner in multi-storey or complex facilities.

The PUDU MT1 can also be controlled manually for ad hoc use – ideal for outdoor areas such as car parks to pick up leaves or rubbish. With a total volume of just 35 litres and its compact design, it can even reach corners that are difficult to access and clean along shelves with impressive precision.

Maintaining the PUDU MT1 is child’s play: thanks to the integrated quick-release fasteners, the waste bin can be emptied in no time and the robot is quickly ready for continuous use.

Rely on pioneering technology and ensure clean, dirt and rubbish-free floors – with the PUDU MT1!

Our tip

Updates of the database and deep learning continuously optimise the intelligent waste detection

Possible applications:

- For coarse dirt and rubbish
- in warehouses, DIY stores or industrial production facilities
- on car parks (manual mode only)

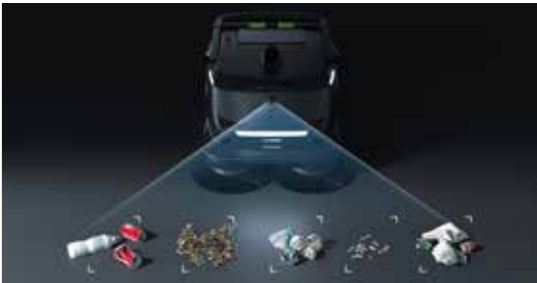

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

Advantages at a glance

#smarter_sweeping_robot

INTELLIGENT WASTE DETECTION

The PUDU MT1 is equipped with AI cameras that recognise and identify different types of waste in real time. Thanks to deep learning and constant database updates, the system becomes more intelligent at precise over time.

COMFORTABLE HANDLING AND FUNCTIONAL DESIGN

The compact construction and quick-release-functionality enable the PUDU MT1 to master even narrow passages with ease and also simplify cleaning and maintenance. With its extendable steering handle, the bot is also ready for ad hoc manual operations.

POURPESFUL AND PRECISE

The PUDU MT1 offers an ultra-wide scanning field and effortlessly scans large areas. During its routine patrols, it recognises waste precisely and effectively – for smarter and efficient cleaning.

PUDU

PUDU SH1

#multifunctional

CAN DO MORE THAN JUST
CLEAN THE FLOOR

PUDU SH1 – Be inspired by its manoeuvrability!

The smart walk-behind scrubber is not only an excellent addition to our PUDU CC1 cleaning robot, but also offers numerous applications that go beyond conventional floor cleaning.

The PUDU SH1 was specially developed for cleaning stubborn dirt and slippery surfaces. Thanks to its wide range of accessories, it can not only clean floors, but also tables, vertical glass surfaces, corners and areas under low furniture.

The patented separation of the air and water flow prevents dirt particles from entering the suction motor. This protects the appliance from possible damage caused by dirty water. The user-friendly touchscreen display and practical controls on the handles make it easy to switch between the different cleaning modes.

There are 7+2 cleaning modes available depending on the location and degree of staining. You can decide for yourself whether the Eco mode should ensure particularly resource-saving cleaning or whether stubborn stains should be removed quickly with powerful high-pressure and high-frequency cleaning.

The PUDU SH1 restores your floor to pristine condition in no time.

Our tip

Saves up to 80% water & detergent compared to conventional mops

Possible applications:

- even under low furniture
- greasy and slippery environments
- with additional accessories also as a vacuum cleaner on tables and vertical surfaces

PUDU

PUDU CC1

#dercleaner

ELEVATOR compatible**

CLEANING ROBOT FOR INDOOR USE

PUDU CC1
from **€362,10*** / pcs.
per month

Our tip

The cleaning status can also be checked from home using the app.

PUDU CC1 – Cleans like a big one!

The small 4-in-1 cleaning robot can sweep, vacuum, scrub and mop. It fills its fresh water tank independently at its optional water change station and also empties its waste water tank there completely autonomously. The bot also regulates the start-up of the charging station independently. To remind the ongoing cleaning task uninterrupted, the bot remembers the last location and starts charging at the point of the last interruption.

The PUDU CC1 is only suitable for indoor use. It cleans a wide variety of hard floors and all short-pile carpet surfaces without any problems.

When several bots are used, they communicate with each other, so that it is therefore possible to have several bots at the same location. For example, one bot could do the sweeping and vacuuming and another the scrubbing and mopping. If this is to be done by one bot, a manual roll change would be necessary.

The PUDU CC1 is able to communicate with the elevator** by means of an additional module and also use it independently. This would also allow cleaning on different floors to be carried out by a bot.

Possible applications:

- Cleaning performance: 700-1.000 m²/h
- Indoor

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

- cleaning agents for PUDU CC1 -
€ 76,20 / pcs.

Water Exchange Station

The water exchange station enables the Pudu CC1 to run a self-sufficient cleaning process. The station is connected directly to a water inlet and outlet. This allows the bot can refill its 15 l clean water tank itself. The station mixes the clean water with the cleaning solution from the side bottle shown. Different mixing ratios can be speci-

fied here depending on the cleaning agent. The bot can also empty the 15 l dirty water tank independently at the water change station. For this purpose, the station is equipped with an additional self-cleaning splash water tank that prevents overflowing. Human intervention is therefore not necessary.

The water change station also serves as a charging station for the bot. If the battery is low, it saves its cleaning progress and moves to the charging station. Once fully charged, the bot resumes its unfinished task at the point of interruption.

Water Exchange Station
€1.950* / pcs.

* All prices are net plus VAT and in euros.

Mobile Water Tank

#applicable_everywhere

Mobile Water Tank – for areas without access to a water supply or drain

It is not always possible to provide a freely accessible water supply or drain for the Water Exchange Station of the PUDU CC1 cleaning robot. But there is a solution – thanks to the Mobile Water Tank, the bot can change its fresh and waste water at almost any location.

Flexible application options thanks to the mobile water tank

With a capacity of 30 litres of fresh and waste water each, the Mobile Water Tank enables the Water Exchange Station to fill and empty the PUDU CC1 cleaning robot even without a direct water supply. The bot is filled directly via the Mobile Water Tank. A fully filled robot can therefore carry out two complete water changes at the station and, depending on the degree of soiling, clean up to 4000 m²**.

The Mobile Water Tank can easily be filled using a watering can or water hose. The tank can also be easily emptied via a floor drain using the integrated drain hose.

Filling the Mobile Water Tank can be integrated into the daily routine. The PUDU app informs you as soon as the device needs refilling.

*** The Water Exchange Station is required in addition to the Mobile Water Tank to fill and charge the bot.

Possible applications:

- almost anywhere where access to fresh water or waste water is not possible
- Tank to be filled manually and placed accordingly
- Sufficient for two water changes and up to 4000 m² of floor cleaning (one power charge required)

* All prices are net plus VAT and in euros.

** During this period, a power loading process must be taken into account.

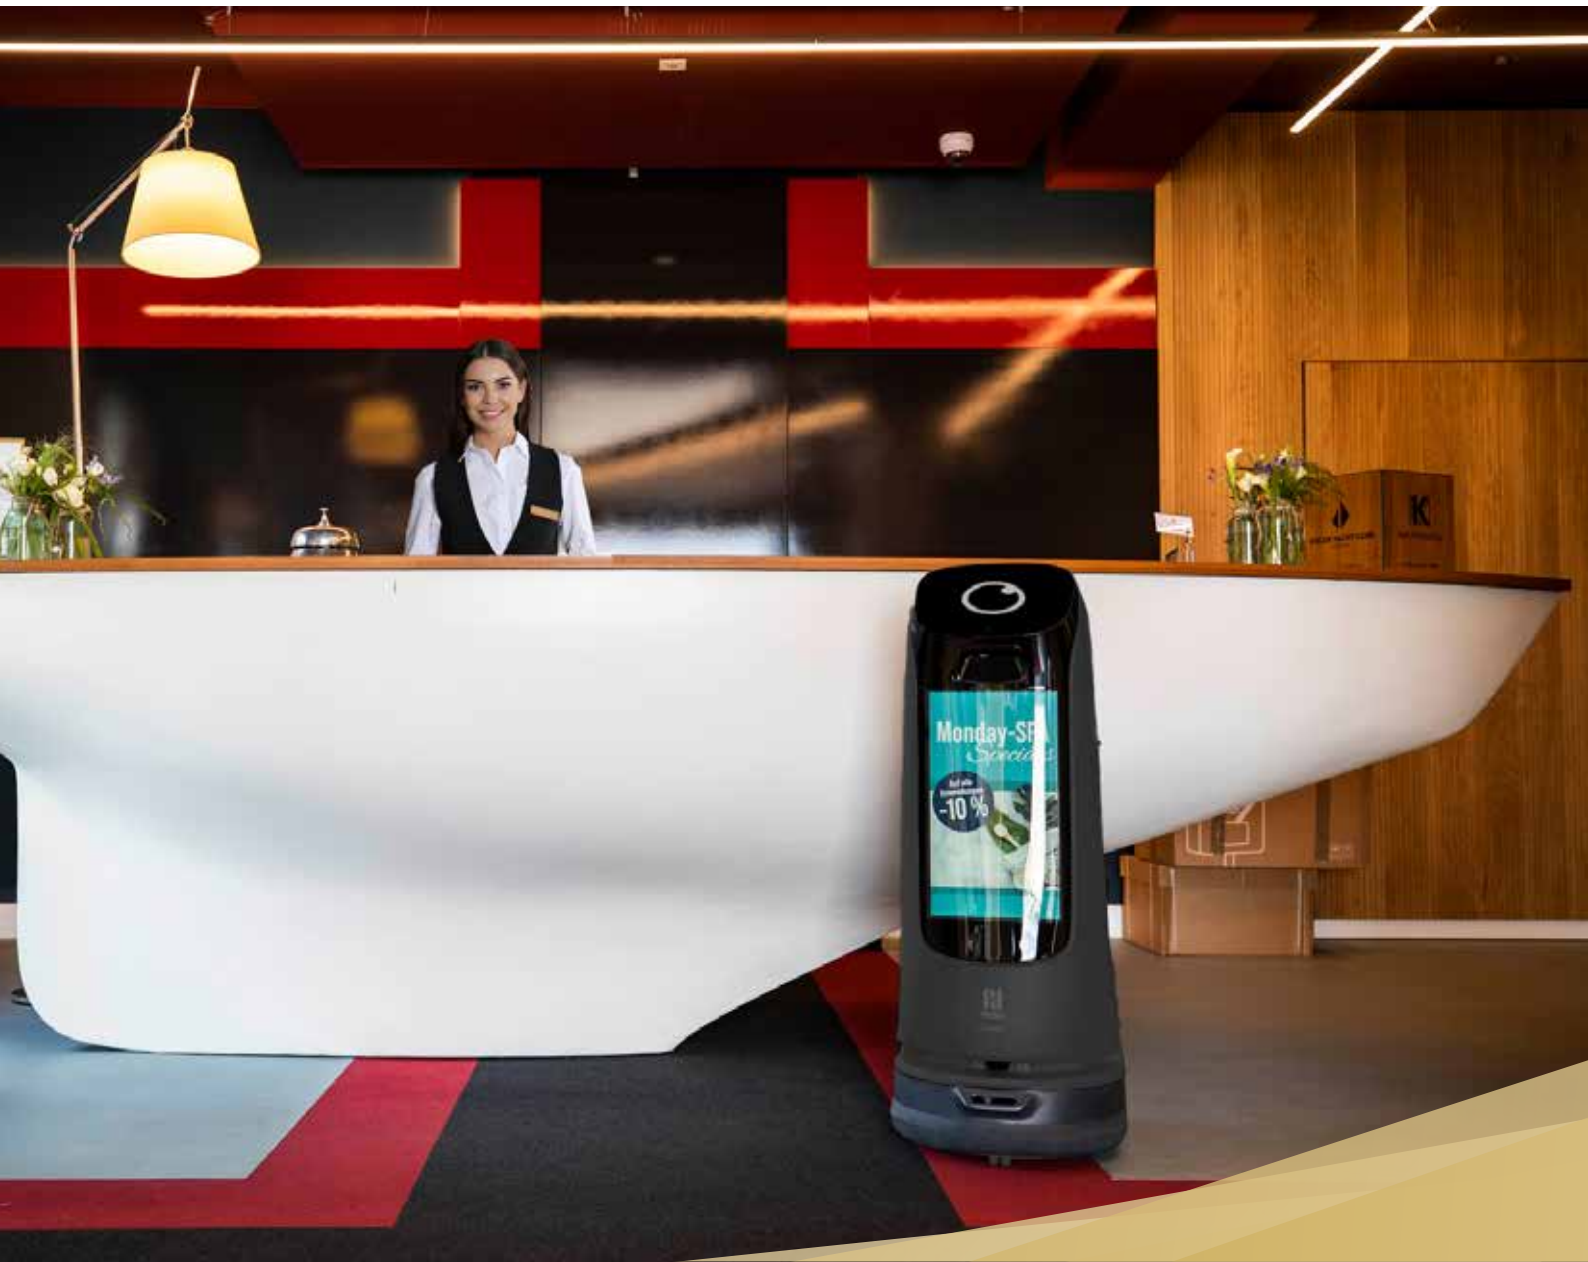

*The crowd-puller
that puts your
message in the
spotlight..*

PUDU

KettyBot PRO

#thecomcommunicator

MARKETING AND NAVIGATION ROBOTS

KettyBot PRO – display offers and guides customers to their destination

The friendly KettyBot PRO interacts with the customer which means it can meet customers at the restaurant entrance or in front of the shop actively address them and point out current offers. To do this, it plays prepared advertisements or video clips on its 18.5" front display. These can even be displayed based on location, for example in a mall, appropriate ads are shown in relevance to the respective businesses. The KettyBot PRO is also able to guide customers to a specific location. For example, to a free table in the restaurant. This function can be adapted for other applications so that the bot can accompany customers to a specific outlet in a mall or alternatively bring them to a special offer in a supermarket.

The customer can navigate via the bot's head display. Up to 100,000 items can be stored on the KettyBot PRO via a database. The customer can access different displays and functions and thus across product groups, offers and even video clips provide additional information.

Via the 'PUDU Merchant Management Platform' the offers can be transferred to the bot online, for example by your marketing department. As soon as this has a WLAN has access, the KettyBot PRO pulls itself out current information from the internet.

Our tip

Let KettyBot inform your customers about the latest offers and create more awareness.

Possible applications:

- Gastronomy
- Shopping arcades
- Reception halls and waiting areas
- Supermarket

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

All prices are net plus VAT and in euros. | * The price is based on the basic price for the purchase of 1 bot and financing over 60 months with a down payment of €2.000,- / bot. | An external charging station for self-sufficient charging of the KettyBot PRO is available for € 575,19 / unit.

Possible Applications

#Ketty_informs

ADVERTISING & INFORMATION AREA

Whether in the hotel bar, the supermarket or the doctor's office, Ketty welcomes guests, Customers and patients and makes them aware of current promotions or events. The ads or short videos can be planned using a calendar on the PUDU Merchant Management Platform, so that offers or events for the month or quarter can be prepared by your marketing department. KettyBot PRO then drives on a clearly defined tour and draws the attention of customers. The displays can also be assigned to specific functions so that the KettyBot can provide information about evening events or the cocktail of the day when serving, for example in hotel operations.

PROMOTION- & PRESENT OFFERS

During special events or theme weeks, the KettyBot PRO can be stocked with goods and, in addition to advertising on the front display, it can be equipped with a back tray which offers space for try-me-out samples or freebies. If desired, an external presenter (Ketty accessory) can also be mounted above the bot. This creates a small additional advertising space which brings products even further into the focus of customers and enables an all-round view. During this period, the bot can be assigned an alternative route, so that, it only drives back and forth in front of the offer.

KETTYBOT PRO AS PRODUCT GUIDE

Behind the bot's cheeky eye is the head display, a touch display that your customer can use to receive further information about products and use the bot as a navigator. Depending on your needs and application, this area can be disabled or actively used. For instance, in PUDU Merchant, you can store product groups and individual items in the Management Platform, which enables customers to select a product and be directed to the desired location. This feature can be used to access specific event offers as well. Do you need further clarification on any of these functions?

SERVICE AND MARKETING
COMBINED

Bella PRO
from €288,90*
per month

BellaBot PRO – Serve and inform at the same time

The BellaBot PRO extends the functions of the classic BellaBot and combines its charming cat design with innovative, multi-modal interaction options. The integrated 18.5-inch advertising screen makes it possible to present additional advertising messages to guests in an appealing way. Current offers, seasonal specials or upcoming events can thus be attractively emphasised.

The display is used via the 'PUDU Merchant Management Platform'. This means that images, adverts or short video clips prepared by your agency can be easily uploaded using drag-and-drop.

In addition, optimised tray recognition offers new options for efficiently organising the order in which food is served.

Our tip

The large 32" touch display can be used to display offers or events and thus advertises additional sales.

Possible applications:

- Restaurants and cafés
- if an advertising display is required
- for changing offers

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

PuduBot2-T – Brilliant touch display with great advertising impact

The 32" touch display makes this bot a real advertising talent. Whether playing offers, video clips or an installed Android app, the possible uses are definitely varied. For example, it can inform the guest in a striking way about the current offers or take an order directly at the table as a mobile ordering terminal. It would also be possible for him to guide customers through a building to a selected location using an app.

Our tip

The large 32" touch display is a real eye-catcher and can be used in many ways, as an advertising space or a mobile ordering terminal

Possible applications:

- Gastronomy
- Shopping arcades
- Reception halls and waiting areas
- Supermarkets
- Cinema

Warehouse Logistics Concepts

Innovative warehouse logistics: increases efficiency with transport robots

Our warehouse logistics concepts offer small and medium-sized companies new possibilities in transport logistics. Like a flexible treadmill, our robots automatically and dynamically take over the routes, perfectly customised to the individual requirements of your location. This noticeably increases the effectiveness of your processes and thus reduces costs.

PULLS, CARRIES OR
TOWS UP TO 300 KG

PUDUT300
from **€363,80***/pcs.
per month

Der PUDU T300 – a work horse for your warehouse logistics

This bot offers new possibilities for your warehouse and operational logistics with a load capacity of up to 300 kg. It transports loads in four different ways: on its loading platform, by lifting function with loading table or a shelf attachment, or in towing mode with a trailer.

The PUDU T 300 is an intelligent heavy-duty industrial robot with high adaptability and multiple work modes.

It fulfils the highest safety standards and has helpful communication lights and a follow-on mode.

Thanks to visual recognition technology, queues and a follow-on function between robots are possible, ideal for material processing and goods transport.

The maps and routing of the PUDU T300 can be easily customised so that changes to the production lines can be quickly and easily taken into account.

Our tip

The T300s communicate with each other and can be combined to form a transport sequence.

Possible applications:

- Warehouse and operational logistics
- Material processing and goods transport
- Follow-on function possible

per month

PuduBot2 with container

The practical container has a capacity of 130 liters in approx. and can be tilted up to tree angles (0° / 30° / 96°), furnishing an ideal mechanism for both comfortable insertion and emptying.

Once the PuduBot2 container is full, it can be sent to the unloading location where another employee receives the bot. The bot takes over the long walking distances while the employee can do other tasks during this time until the next bot is ready.

Intended as a laundry container, the practical tipping box can of course also be used to collect other things. The high-quality container is made of robust 2 mm thick aluminium and is completely white inside and out powder coated. Due to its nature, it can also transport garbage, for example. If something leaks, the container can be cleaned with a wet cloth.

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

Possible applications:

- Hotel industry, housekeeping
- Transport, logistics

PuduBot2 as a warehouse assistant

Equipped with a fixed base plate, the PuduBot2 can be used as required and the installation height of the base plate can be equipped with four Euro boxes (600 x 400 x 200 mm) or up to twelve flat Euro boxes (600 x 400 x 50 mm). This is how the bot can be loaded centrally by an employee in the warehouse and taken to a wide variety of destinations. With the PuduBot2, long walking distances are no longer a concern as the robot takes over this task, protecting human colleagues and providing them with physical relief.

For an **additional warranty extension**, you can book our **attractive maintenance packages**. Please do not hesitate to contact us.

Possible applications:

- Indoor and outdoor areas
- Warehouse and logistics

*The best
communication –
in every respect!*

Functionality

Extended interaction – in the building, with lifts or automatic doors

With our clever communication modules, we make your robots even smarter in their unique environment. In addition to the robots' existing ability to interact with each other, a practical call system or seamless integration into your elevator environment – to name just a few other possibilities.

Discover

ADDITIONAL MODULES AND FUNCTIONALITY FOR
COMMUNICATION

Call & send bots at the touch of a button

#buzzer&puduwatch

PUDU-Buzzer

With the PUDU buzzer, the HolaBot can be sent or called to a fixed destination. For example, it is possible to send the bot from the counter to the scullery as soon as it is fully loaded as a clearing trolley.

At the Hola-Service-Station, the buzzer is used to fetch the bot. At the touch of a button, the bot is then driven from the scullery to the „clearing station“ destination.

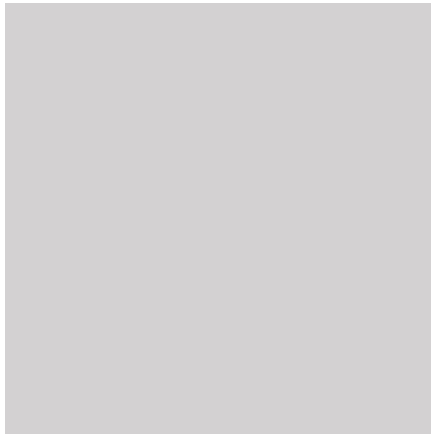

The PUDU buzzer communicates with the router and this sends a free bot assigned to the buzzer to the destination.

PUDU Watch / Call Receiver

PUDU Watch: All functions that can be controlled via the bot can also be carried out via the PUDU Watch. For example, the service staff can use it to call the HolaBot to the table over long distances. Equipped with a SIM card, the watch is 4G-capable and in this case, is not dependent on a WLAN.

Communication and Use of elevator or automatic doors

Don't worry, you don't need a new elevator for this...

Three of our innovative robots can communicate with your elevator via an interface. SwiftBot, FlashBot and the PUDU CC1 can call it, select the required floor and then exit the elevator on the corresponding floor. This is possible by means of an elevator API box that is installed on the elevator car. Newer elevators often already have such an interface integrated into their software. It should be noted that the bot requires access to the WLAN for communication.

** For the use / communication of the bot with the elevator may incur additional installation costs may be incurred.

THANKS TO ELEVATOR
COMMUNICATION, FLOOR
SERVICE IS POSSIBLE

Opening automatic doors

Similar to communication with the elevator, there is a corresponding interface for automatic doors. However, no WLAN access is required to use the automatic door API box. The bots communicate directly with the API box. All our service robots are able to communicate with automatic doors and open them.

EVEN AUTOMATIC DOORS
OR ROLLER GATES ARE NOT
AN OBSTACLE ANYMORE

Our service includes: advice, location assessment, a customised service concept, delivery, installation, detailed instruction and follow-up advice on use if required, as well as a customised design for your Bella or HolaBot.
